

Essential Services Screening Recommendations for COVID-19 Pandemic

To help protect the public against the spread of COVID-19, Governor John Carney and Delaware Division of Public Health Director Karyl T. Rattay, MD, MS, are requiring that high-risk businesses, and strongly recommend that all other employers, screen employees each day before work by following these steps:

Note: This document was updated on November 19, 2020 to reflect [recently updated guidance](#) from the Centers for Disease Control and Prevention (CDC)

- All employees who are able to work from home should continue working from home at this time.
- For those employees who must report to work: If an employee self-reports or is noted to have body temperature **at or above 100.4 degrees Fahrenheit**, that employee should not report to work, or should be sent home if temperature is identified upon arrival at work, and will require further evaluation by a medical professional before re-entering the workplace.
- For those employees who must report to work: each employee **must be asked about and report body temperature at or above 99.5 degrees Fahrenheit**. If the facility has the capability to perform active temperature monitoring, they may do so. Temperatures at or above 99.5 require discussion with the employee to determine if there is an underlying cause, followed by monitoring throughout the day to ensure the temperature does not increase or additional symptoms do not develop.
 - It is best to use touchless thermometers (forehead/temporal artery thermometers) if possible, but if you must use oral or other types of thermometers, make sure to clean the thermometers thoroughly between each employee, as to not spread infection.
 - Follow the manufacturer's directions to disinfect the thermometer.
 - If no directions are available, rinse the tip of the thermometer in cold water, clean it with alcohol or alcohol swabs, and then rinse it again.
 - If you do not have thermometers on site, have your employees take their temperatures at home. They should stay home if they have an elevated temperature at or above 100.4 degrees Fahrenheit and follow the same protocol.
 - Personnel screening employees for fever should consider wearing gloves and face masks per CDC recommendations.
- Employers must screen each incoming employee with a basic questionnaire, which should include at least the below, however can be made more comprehensive and/or employer-specific in consultation with medical professionals:
 - Do you have symptoms of respiratory infection (fever or shaking chills, cough, shortness of breath, severe sore throat, loss of taste or smell, or muscle aches) or nausea or vomiting, diarrhea, or headache, congestion or runny nose?
 - If YES, but symptoms have a known cause (allergies, asthma, COPD, chronic sinusitis, etc.), employer or medical personnel should weigh risks for COVID-19 exposure and may consider sending employee home.

employees wear a facemask while at work for the 14 days after the exposure event if there is a sufficient supply of facemasks. If the employee develops even mild symptoms consistent with COVID-19, they must cease patient care activities, don a facemask (if not already wearing), and notify their supervisor or occupational health services prior to leaving work.

Remember to continue to follow preventative measures no matter how many employees are in the office – physical distancing, stay home when sick, use cough and sneeze etiquette, and practice hand hygiene as often as possible. Clean all high-touch surfaces regularly. For more information, visit de.gov/coronavirus.

Individuals with questions about COVID-19 should call Delaware 2-1-1; individuals who are deaf or hard of hearing can text their ZIP code to 898-211, or email info@delaware211.org. Medically related questions regarding testing, symptoms, and health-related guidance can be submitted by email at DPHCall@delaware.gov.
